

About the company

CashSentinel is a Fintech that designs and operates digital contracting and payment solutions, targeting European online marketplaces. Our clients operate in various fields such as automotive, department stores, ski resorts and online pharmacies.

The company is breakeven and growing its business volume by >150% every year. The company is composed of 4 legal entities (Switzerland, France, Spain and UK) and employs ~15 people, who are mainly based in Lausanne, Switzerland and Barcelona, Spain.

About the job

- Managing information systems and networks
- Assisting development colleagues in implementing new services
- Performing security and data risk analysis and reviews, internally and with external partners and providers
- Work towards a continuous improvement of platform performance and availability

Our tech stack in a few words: Bare Metal Virtualization, Linux, Docker, SoftFW, High Availability, Java microservices, MySQL, Azure cloud.

Who we are looking for

- Passionate about Linux, networks and security
- Bachelor or Master degree in the field of information systems, security or similar
- A first experience in Linux system administration and/or cybersecurity would be an asset
- Essential personality traits: team player, voluntary, positive, rigorous, dedicated

Other requirements and information

- EU or Swiss citizen or valid Swiss work permit
- Blank criminal record
- Fluent in English (oral and written), knowledge of French a big plus
- Ability to come full-time (80%-100%) to our Lausanne office, hybrid model possible beyond the first few months

→ Join a young and dynamic team, in a healthy work environment. Participate to the growth and success of our company, from the heart of Lausanne!
